

# YEARLY REPORT ON THE OPERATION OF THE CZECH ELECTRICITY GRID FOR 2021

# TABLE OF CONTENTS

1	ABBREVIATIONS, ACRONYMS AND EXPLANATIONS	4
2	COMMENTARY	6
3	ELECTRICAL ENERGY BALANCES, GENERATION AND CONSUMPTION	7
3.1	Electrical energy balances – generation	7
3.2	Electrical energy balances – consumption	8
3.3	Development of electrical energy balances and generation	9
3.4	Year-on-year change in electricity generation	10
3.5	Fuels and technologies used in gross electricity generation	11
3.6	Fuels and technologies used in gross electricity generation	12
3.7	Development of electricity generation and consumption	13
3.8	Year-on-year change in electricity consumption	14
3.9	Long-term development in electricity generation and consumption	15
3.10	Development of electricity consumption by demand category	16
4	ELECTRICITY GENERATION AND CONSUMPTION IN CZECH REGIONS AND REGIONAL DISTRIBUTION SYSTEMS	17
4.1	Gross electricity generation in Czech Regions by generating technology	17
4.2	Net electricity consumption in Czech Regions by demand category	17
4.3	Net electricity consumption in Czech Regions by national economy sector	18
4.4	Year-on-year change in net electricity consumption by national economy sector	19
4.5	Fuels and technologies in gross electricity generation in Czech Regions	20
4.6	Installed capacity and electricity generation and consumption in each of the Czech Regions	21
4.7	Net electricity consumption in each RDS	35
4.8	Year-on-year change in net electricity consumption in regional distribution systems	36
5	ELECTRICITY GENERATION BY TECHNOLOGY AND FUEL	37
5.1	Nuclear power plants and thermal power stations	37
5.2	Combined cycle plants	38
5.3	Gas fired power stations	39
5.4	Hydroelectric, including pumped storage, power stations	40
5.5	Wind power plants	41
5.6	Photovoltaic plants	42
5.7	Combined heat and power generation	43
5.8	Generation from biomass	44
5.9	Generation from biogas	45
6	INSTALLED CAPACITY IN THE CZECH ELECTRICITY GRID AND BREAKDOWN BY CZECH REGIONS	46
7	CROSS-BORDER FLOWS	47
7.1	Cross-border physical flows	47
7.2	Year-on-year change in cross-border physical flows	48
7.3	Development of cross-border physical flows	48
8	PEAK AND MINIMUM LOADS	49
8.1	Monthly peak and minimum gross loads in the Czech electricity grid	49
8.2	Structure of meeting the year's daily peak/minimum loads on the Czech grid in 2021	50
8.3	Days of the peak and minimum loads on the Czech grid between 2014 and 2021	51
9	BALANCES, TECHNICAL DETAILS AND SUPPLY QUALITY IN TS AND RDS AND TARIFF STATISTICS	52
9.1	Balances of physical flows in the TS and RDS	52
9.2	Lengths of routes and lines in the TS and RDS	53
9.3	Supply points and transformers in the TS and RDS	54
9.4	Key technical details on the TS and RDS	55
9.5	Development in the electricity supply quality	56
9.6	Tariff statistics	57
9.7	Development in the tariff statistics	58
10	ADDITIONAL GRAPHS AND ELECTRICAL ENERGY BALANCE DIAGRAM	60

## INTRODUCTION

The Energy Regulatory Office (ERO) publishes the Yearly Report on the Operation of the Czech Electricity Grid for 2021 under Section 17 (7) (m) of Act No 458/2000 on business conditions and public administration in the energy sectors and amending certain laws (the Energy Act), as amended. The statistics contained herein are mainly intended for Czech governmental authorities and institutions and those of the European Union, and the expert circles.

In this report, the ERO discloses all available operating and technical data representing physical flows of electricity. The ERO obtains data for the yearly report under Public Notice 404/2016 on the particulars and structure of the returns required for preparing reports on the operation of systems in energy industries, including the dates, scope and rules for preparing the returns (the Statistics Public Notice), as amended, which came into effect on 1 January 2017. Under its competences set out in Section 20a (4) (e) of the Energy Act, the market operator prepares its monthly and yearly statistics of the electricity and gas markets, which supplement the ERO's statistics with trading data.

The details of the methodology for reporting data for the ERO statistics are specified in the ERO's Explanatory Statement 8/2018 of 14 September 2018 on the method of completing the returns under the statistics public notice for the electricity and heat supply industries. The Explanatory Statement and the current returns are posted on the ERO's website.

All data for this yearly report has been obtained from licensed entities: electricity generators, distribution system operators, the transmission system operator, and the market operator.

This Yearly Report on the Operation of the Czech Electricity Grid for 2021 follows up on the yearly reports released in preceding years and provides information about the electricity industry's key statistics for 2021, including their development over the past ten years. Its respective chapters contain statistics on electrical energy balances, generation and consumption by category, including generation from renewable energy sources (RES) and combined heat and power generation (CHP). The report also contains an overview of the installed capacities in the Czech electricity grid, cross-border electricity flows, some Region-specific evaluations, and tariff statistics. The yearly report for 2021 is based on the data in the report for 4Q 2021 and contains some 2020 and 2021 data that is more accurate, largely in connection with an update of the data from OTE, a.s. and corrections of identified mistakes.

# 1 ABBREVIATIONS, ACRONYMS AND EXPLANATIONS

<b>BDMW</b>	biologically degradable municipal waste
<b>CAIDI</b>	Customer Average Interruption Duration Index in the period under review
<b>CC</b>	combined cycle plants
<b>ČEPS</b>	ČEPS, a.s. - the Transmission System Operator
<b>ČEZ Distribuce</b>	ČEZ Distribuce, a. s. - a Regional Distribution System Operator
<b>DS</b>	distribution system
<b>DSO</b>	distribution system operator
<b>EG.D</b>	EG.D, a.s. - a Regional Distribution System Operator
<b>EHV</b>	extra high voltage over 52 kV (under the ČSN 330010 standard) [ $\approx$ high voltage]
<b>GFPS</b>	gas fired power stations
<b>HD_C</b>	high demand customers
<b>HE</b>	hydroelectric power stations
<b>HV</b>	high voltage from 1 kV to 52 kV (under the ČSN 330010 standard) [ $\approx$ medium voltage]
<b>CHP</b>	combined heat and power generation
<b>LD_B</b>	low demand customers, businesses
<b>LD_H</b>	low demand customers, households
<b>LDS</b>	local distribution system
<b>LV</b>	low voltage up to 1 kV (under the ČSN 330010 standard)
<b>NPP</b>	nuclear power plants
<b>PREDistribuce</b>	PREDistribuce, a.s. - a Regional Distribution System Operator
<b>PSHE</b>	pumped storage hydroelectric power stations
<b>PV</b>	photovoltaic plants
<b>RDS</b>	regional distribution system
<b>RES</b>	renewable energy sources
<b>SAIDI</b>	System Average Interruption Duration Index in the period under review
<b>SAIFI</b>	System Average Interruption Frequency Index in the period under review
<b>TPS</b>	thermal power stations
<b>TS</b>	transmission system
<b>TSO</b>	transmission system operator
<b>WPP</b>	wind power plants

**Balancing difference =**

Gross electricity generation + cross-border balance - national gross consumption (TBS).

**Total losses =**

Losses in distribution system operators' and the transmission system operator's networks.

**Installed capacities =**

Installed capacities reflect the capacities actually connected in the transmission system and the distribution systems, i.e. the figures do not reflect the sum of the capacities from licences awarded for the respective category of electricity generation.

**Local consumption =**

Consumption of producers and entities directly connected to the respective generating plant.

**Cross-border balance =**

Net balance of cross-border exchanges of electrical energy in a given period. It is the difference between total electricity imports and total electricity exports in a given period. A positive value denotes electricity imports exceeding exports, and a negative value denotes electricity exports exceeding imports.

**Electricity consumption in the CR =**

NNC - OUh.

**Own use (process only) for electricity generation (OUe) =**

This expression denotes the consumption of electricity that is required for the electricity generating process. It covers all operations that are crucial for electricity generation, including losses in electricity generation. The definition is based on 'process own use' specified in Section 2(u) of Act No 165/2012 on supported energy sources and amending certain laws, as amended.

**Own use (process only) for heat production (OUh) =**

Analogous to OUe.

**National gross consumption (NGC) =**

NNC + consumption for pumping at PSHE + total losses + OUe.

**National net consumption (NNC) =**

HD\_C at the EHV level + HD\_C at the HV level + LD\_H + LD\_B + consumption of the TSO and DSOs + local consumption + OUh.

**Gross electricity generation =**

Total electricity available at generator terminals.

**Net electricity generation =**

Gross electricity generation minus OUe.

**Gross load =**

The hourly value of electrical power supplied to the Czech electricity grid by connected electricity producers +/- net balance - pumping at PSHE.

**Load (without OUe) =**

Gross load - OUe.

## 2 COMMENTARY

In 2021, gross electricity generation totalled 84.9 TWh, up by 3.5 TWh (+4.3%) on 2020. The largest year-on-year change in gross electricity generation was registered in thermal power stations, which produced 3.4 TWh more (+9.8%) year-on-year while their installed capacity declined to 9.5 GW, i.e. by 0.5 GW (-5.3%); this decline was mainly attributable to the shutdown of the Mělník III Power Station. Electricity generation also increased in nuclear power plants, by 0.7 TWh (+2.3%), in hydroelectric power stations by 0.3 TWh (+12.3%), and in gas-fired power stations by 0.1 TWh (+3.7%). The installed capacity of gas-fired power stations increased by 2.2%, mainly due to capacities commissioned in the Středočeský and Jihomoravský Regions. On the other hand, electricity generation dropped the most in combined cycle units, by 0.8 TWh (-13.3%), and relatively also in wind power plants by 0.1 TWh (-14%). Pumped-storage hydroelectric power stations produced 0.1 TWh less (-6.3%). Gross electricity generation from brown coal and hard coal rose by 2.3 TWh (+8%) and 0.8 TWh (+44.3%) respectively, and from natural gas by 0.4 TWh (+6.6%) compared with 2020.

Gross electricity generation from renewable energy sources increased by 255 GWh (+2.5%) year-on-year. Electricity generation in wind power plants dropped by 98 GWh (-14%). Similarly, electricity generation declined by 84 GWh (-3.7%) in photovoltaic plants, with generation from biogas and landfill gas also declining (-0.1%). On the other hand, as regards the other renewable energy sources, electricity generation increased year-on-year, the most in large hydroelectric power stations (with an installed capacity of 10 MW or more) by 217 GWh (+22.5%). Biomass registered an increase of 166 GWh (+6.6%), small hydroelectric power stations by 48 GWh (+4%), and biologically degradable municipal waste by 8 GWh (+6.6%).

Gross electricity consumption rose to 73.7 TWh (+3.2%) in 2021. Most of the increase took place in households, by 1.3 TWh (+8.1%), and at high-demand customers taking power from HV networks, 1 TWh (+4.4%) and at high-demand customers taking power from EHV networks, 0.3 TWh (+4.6%). On the other hand, low-demand business customers took 41 GWh less in 2021 (-0.5%).

As in preceding years, 2021 also saw a continuously negative net balance of electricity imports and exports, amounting to 11.1 TWh for the whole year. This implies a year-on-year increase of 0.9 TWh (+9.1%). Exports and imports rose by 2.7 TWh (+11.5%) and 1.8 TWh (+13.4%) respectively year-on-year.

The annual peak load in the grid was registered on 15 February 2021 at 08:45 hrs (12,159 MW), marking a new highest-ever annual peak load on the grid and surpassing the 2018 record. The annual minimum load was registered on 8 August 2021 at 05:45 hrs (4,871 MW). The report also evaluates 15-minute load and consumption variations, including the structure of the generating capacities covering the peak load and the minimum load. Consumption on the peak and minimum load days in preceding years is also shown.

The report also shows the key technical data on the transmission system and regional distribution systems, including the supply quality ratios. The report contains tariff statistics, including their development over the last ten years. The statistics provide an overview of the number of supply points and electricity consumption by distribution tariff; they are based on billing data. The Sankey diagram, depicting the electrical energy balance for 2021, is attached at the end of the report.

### 3 ELECTRICAL ENERGY BALANCES, GENERATION AND CONSUMPTION

#### 3.1 Electrical energy balances – generation [GWh]

	January	February	March	April	May	June	July	August	September	October	November	December	Total
<b>Gross electricity generation</b>	<b>8,249.3</b>	<b>7,241.4</b>	<b>7,495.1</b>	<b>6,442.6</b>	<b>5,860.1</b>	<b>5,965.2</b>	<b>6,171.0</b>	<b>6,141.3</b>	<b>6,785.1</b>	<b>8,004.2</b>	<b>8,278.3</b>	<b>8,273.8</b>	<b>84,907.3</b>

Monthly peak and minimum loads [MW]

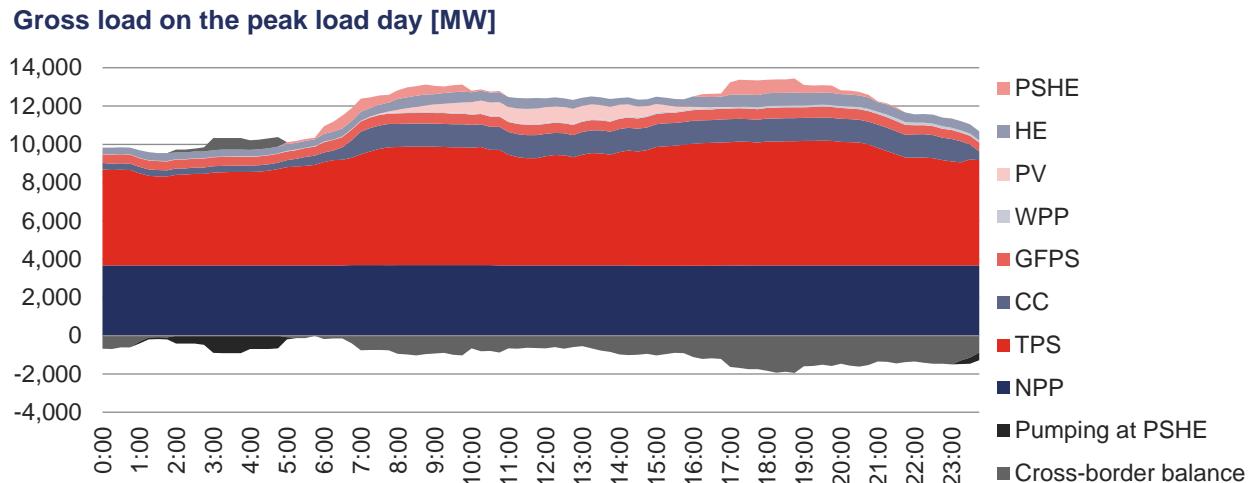

Peak load time and minimum load time

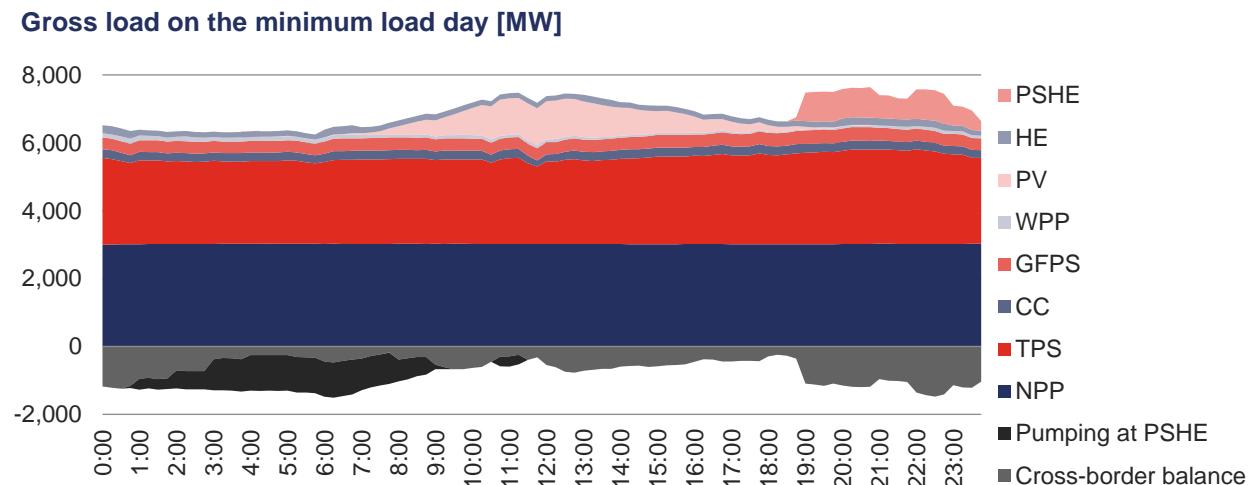

## 8.2 Structure of meeting the year's daily peak/minimum loads on the Czech grid in 2021

Structure of meeting the daily peak load		
	[MW]	
<b>Gross load</b>	<b>12,159.0</b>	<b>100%</b>
Nuclear power plants (NPP)	3,678.9	30%
Thermal power stations (TPS)	6,201.1	51%
Combined cycle plants (CC)	1,206.0	10%
Gas fired power stations (GFPS)	554.3	5%
Hydroelectric power stations (HE)	581.1	5%
Pumped storage power stations (PSHE)	514.5	4%
Photovoltaic plants (PV)	330.9	3%
Wind power plants (WPP)	54.7	0%
Cross-border balance	-962.6	-8%
Pumping at PSHE	0.0	0%

Structure of meeting the daily minimum load		
	[MW]	
<b>Gross load</b>	<b>4,870.5</b>	<b>100%</b>
Nuclear power plants (NPP)	3,024.5	62%
Thermal power stations (TPS)	2,368.4	49%
Combined cycle plants (CC)	237.1	5%
Gas fired power stations (GFPS)	339.5	7%
Hydroelectric power stations (HE)	152.2	3%
Pumped storage power stations (PSHE)	0.0	0%
Photovoltaic plants (PV)	7.8	0%
Wind power plants (WPP)	115.8	2%
Cross-border balance	-333.6	-7%
Pumping at PSHE	-1,041.1	-21%

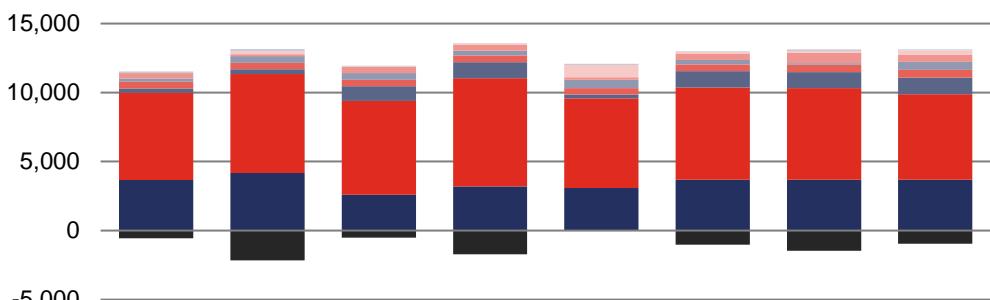

## 8.3 Days of the peak and minimum loads on the Czech grid between 2014 and 2021

Peak load days	NPP	TPS	CC	GFPS	HE	PSHE	PV	WPP	Cross-border balance		Pumping at PSHE	OUE	Gross load	Load (w/o OUE)	Gross consumption

Peak loads on the Czech grid between 2014 and 2021

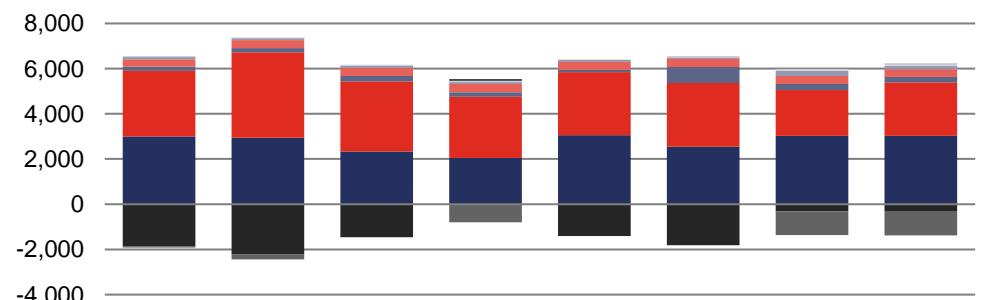

- Nuclear (NPP)
- Thermal (TPS)
- Gas fired (GFPS)
- Photovoltaic (PV)
- Pumping at PSHE

- Combined cycle (CC)
- Hydro (HE)
- Pumped storage (PSHE)
- Wind (WPP)

- Cross-border balance

Minimum loads on the Czech grid between 2014 and 2021

- Nuclear (NPP)
- Thermal (TPS)
- Gas fired (GFPS)
- Photovoltaic (PV)
- Pumping at PSHE

- Combined cycle (CC)
- Hydro (HE)
- Pumped storage (PSHE)
- Wind (WPP)

## 9 BALANCES, TECHNICAL DETAILS AND SUPPLY QUALITY IN TS AND RDS AND TARIFF STATISTICS

### 9.1 Balances of physical flows in the TS and RDS

Note: The tariff statistics in chapters 9.6 and 9.7 have been compiled from regulatory reports under Section 20 of Act No 458/2000, the Energy Act, as amended, and include only the three largest regional distribution systems. The numbers of supply points relate to 31 December of the respective year and include electricity producers' delivery points that do not have to be supply points. The consumption data shows the billed electricity quantities accepted from the documents issued in the respective year and therefore does not match the consumption data in the other chapters of the Report.

# 10 ADDITIONAL GRAPHS, AND ELECTRICAL ENERGY BALANCE DIAGRAM

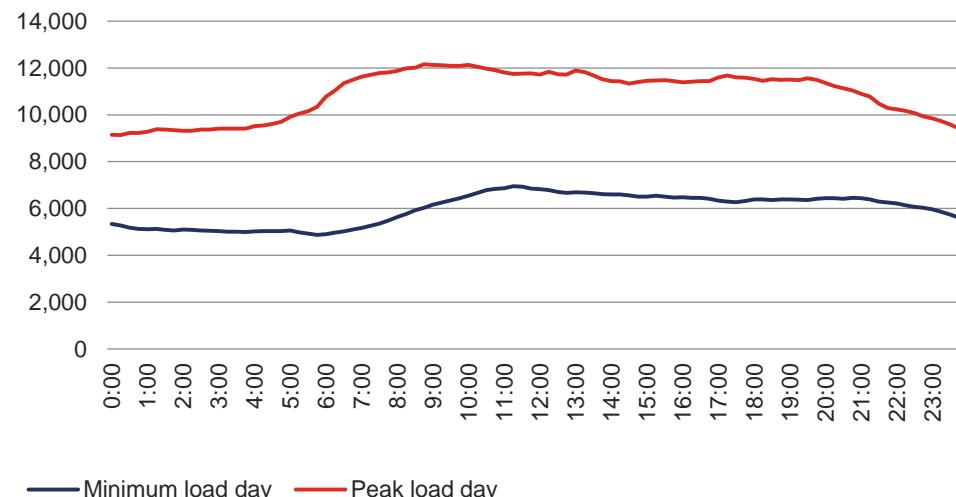

Fuels used in gross electricity generation [GWh]

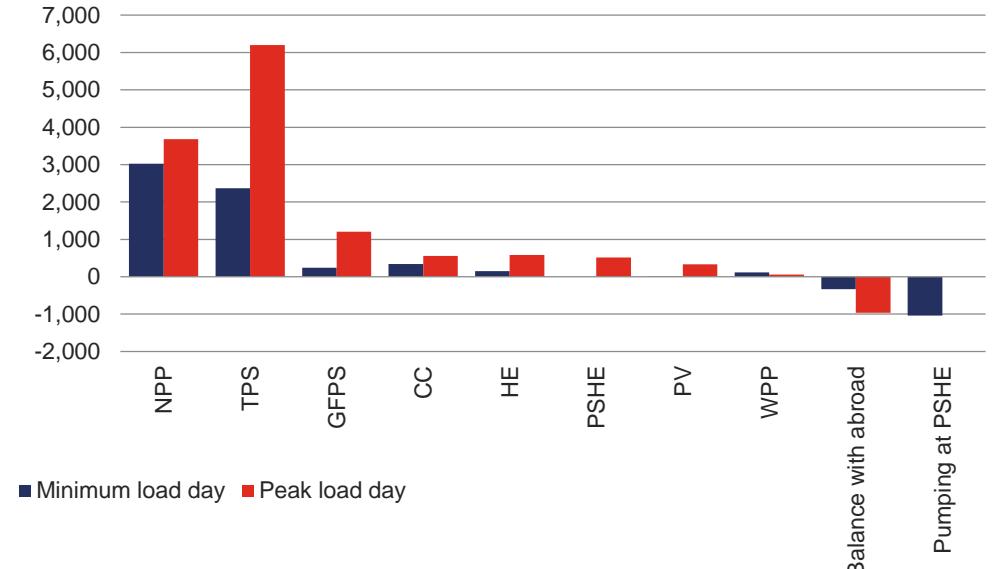

Gross load factor curve [MW]

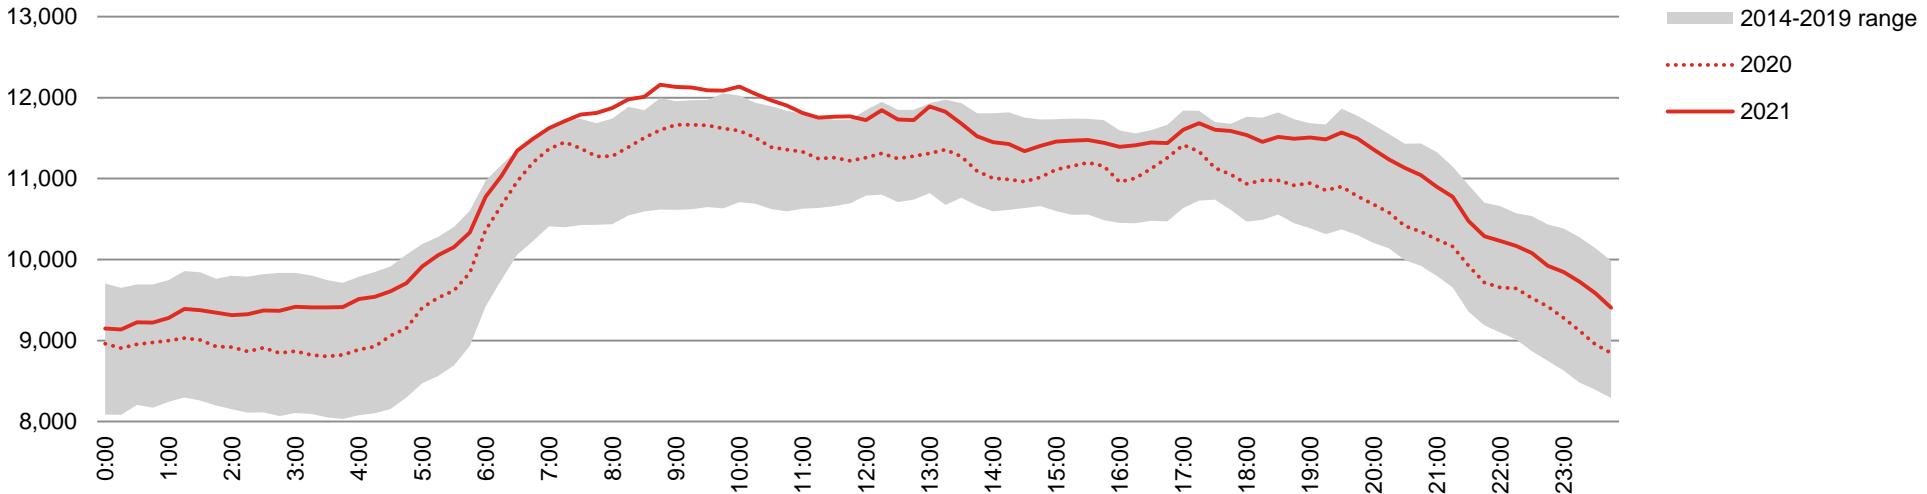

Gross consumption on peak and minimum load days [MWh]

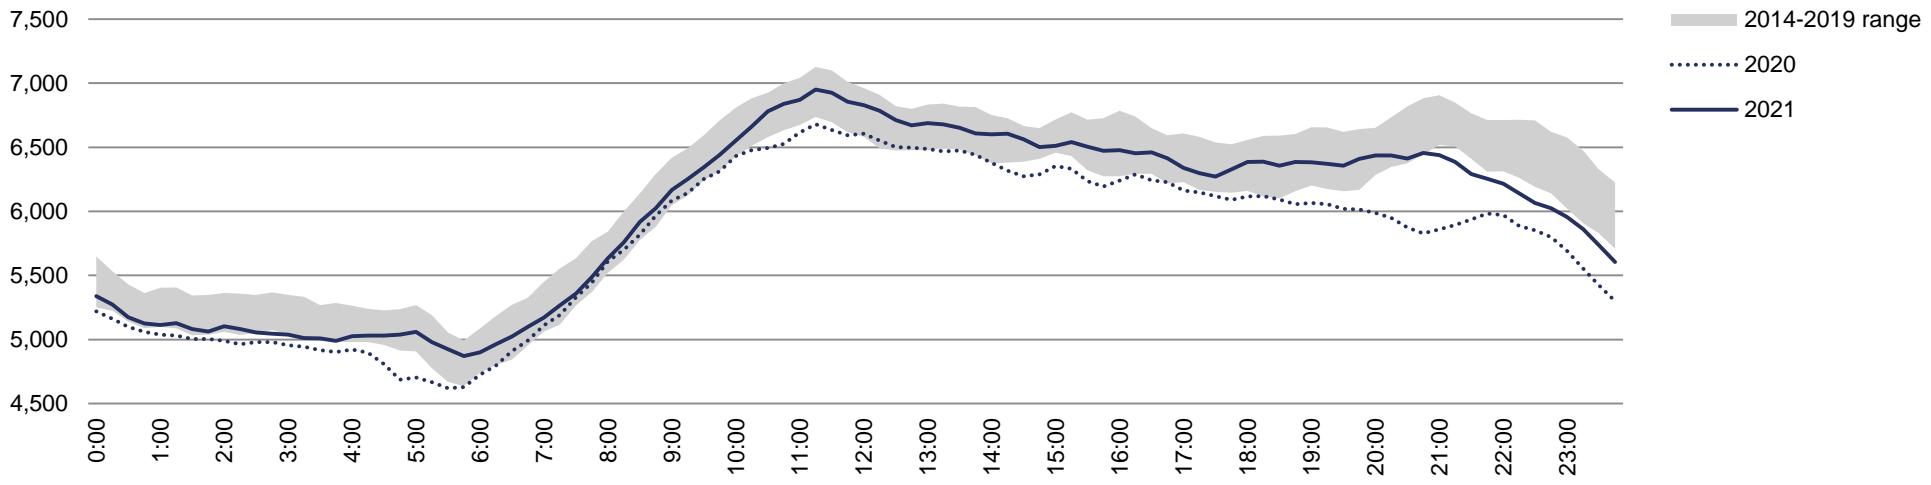

Structure of meeting the daily peak and minimum loads [MW]

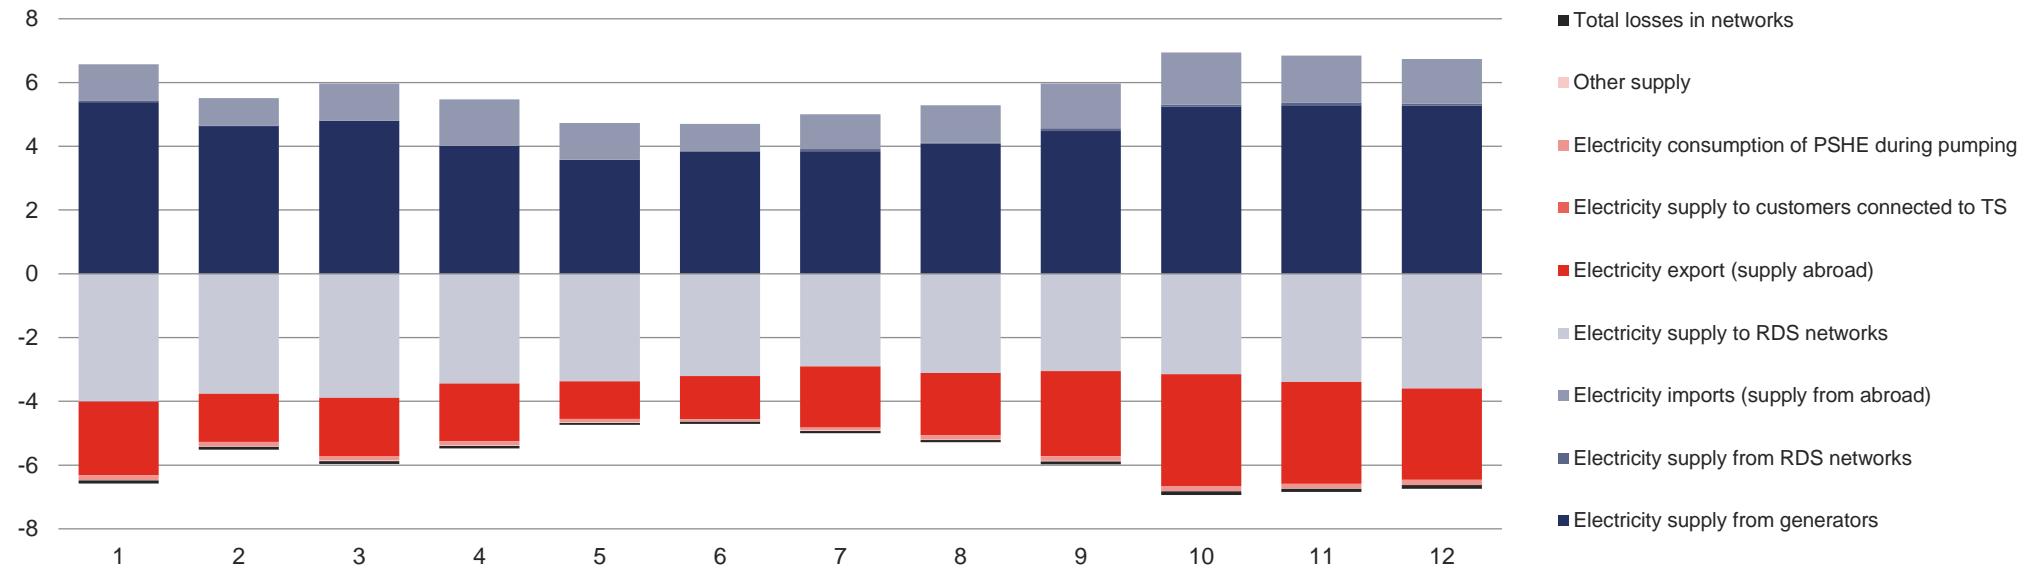

### Gross consumption on the days of annual peak [MW]

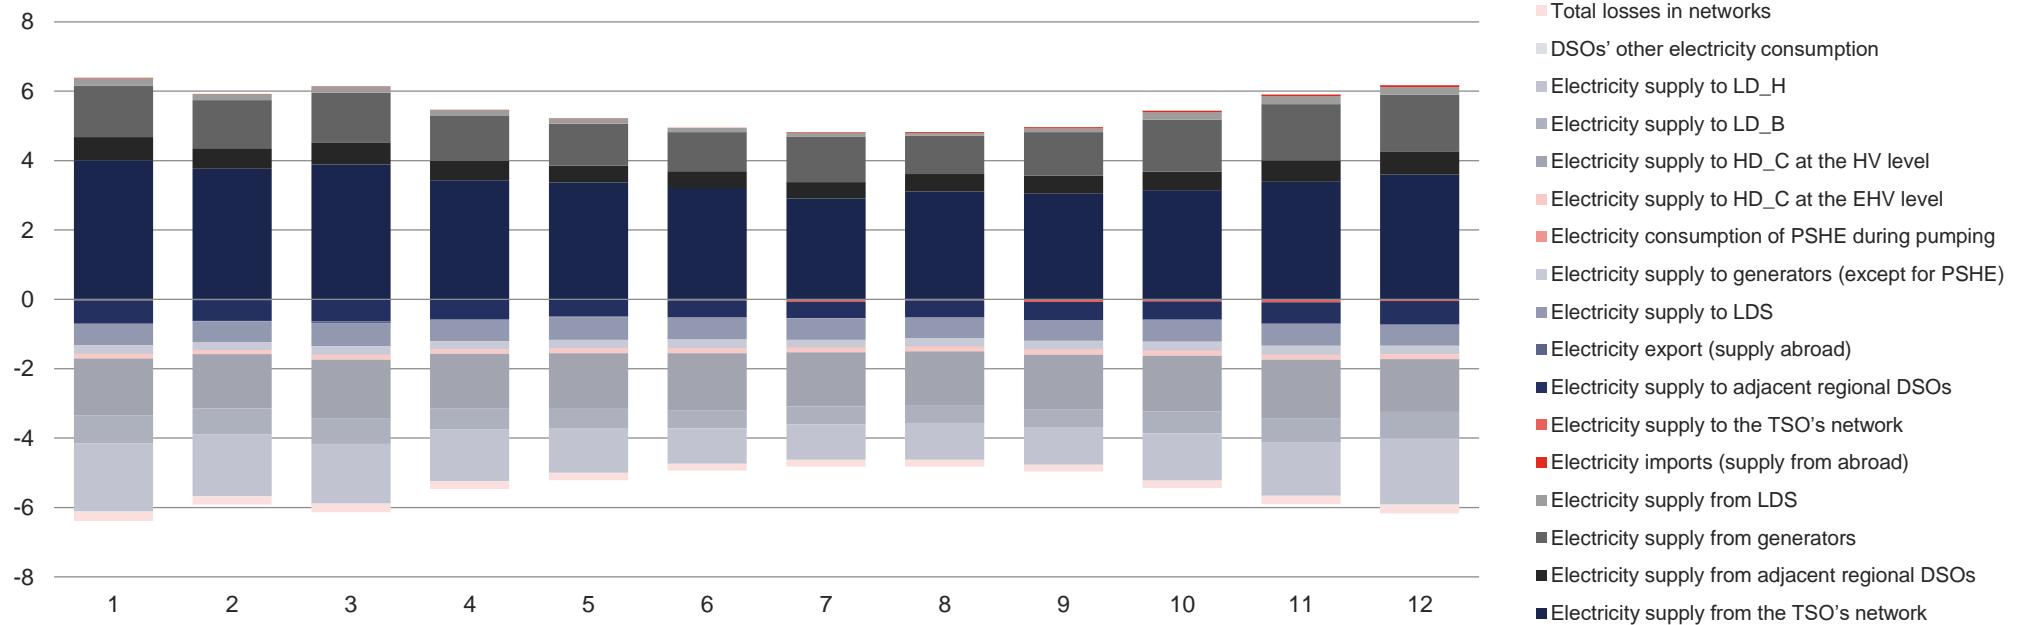

### Gross consumption on the days of annual minimum [MW]

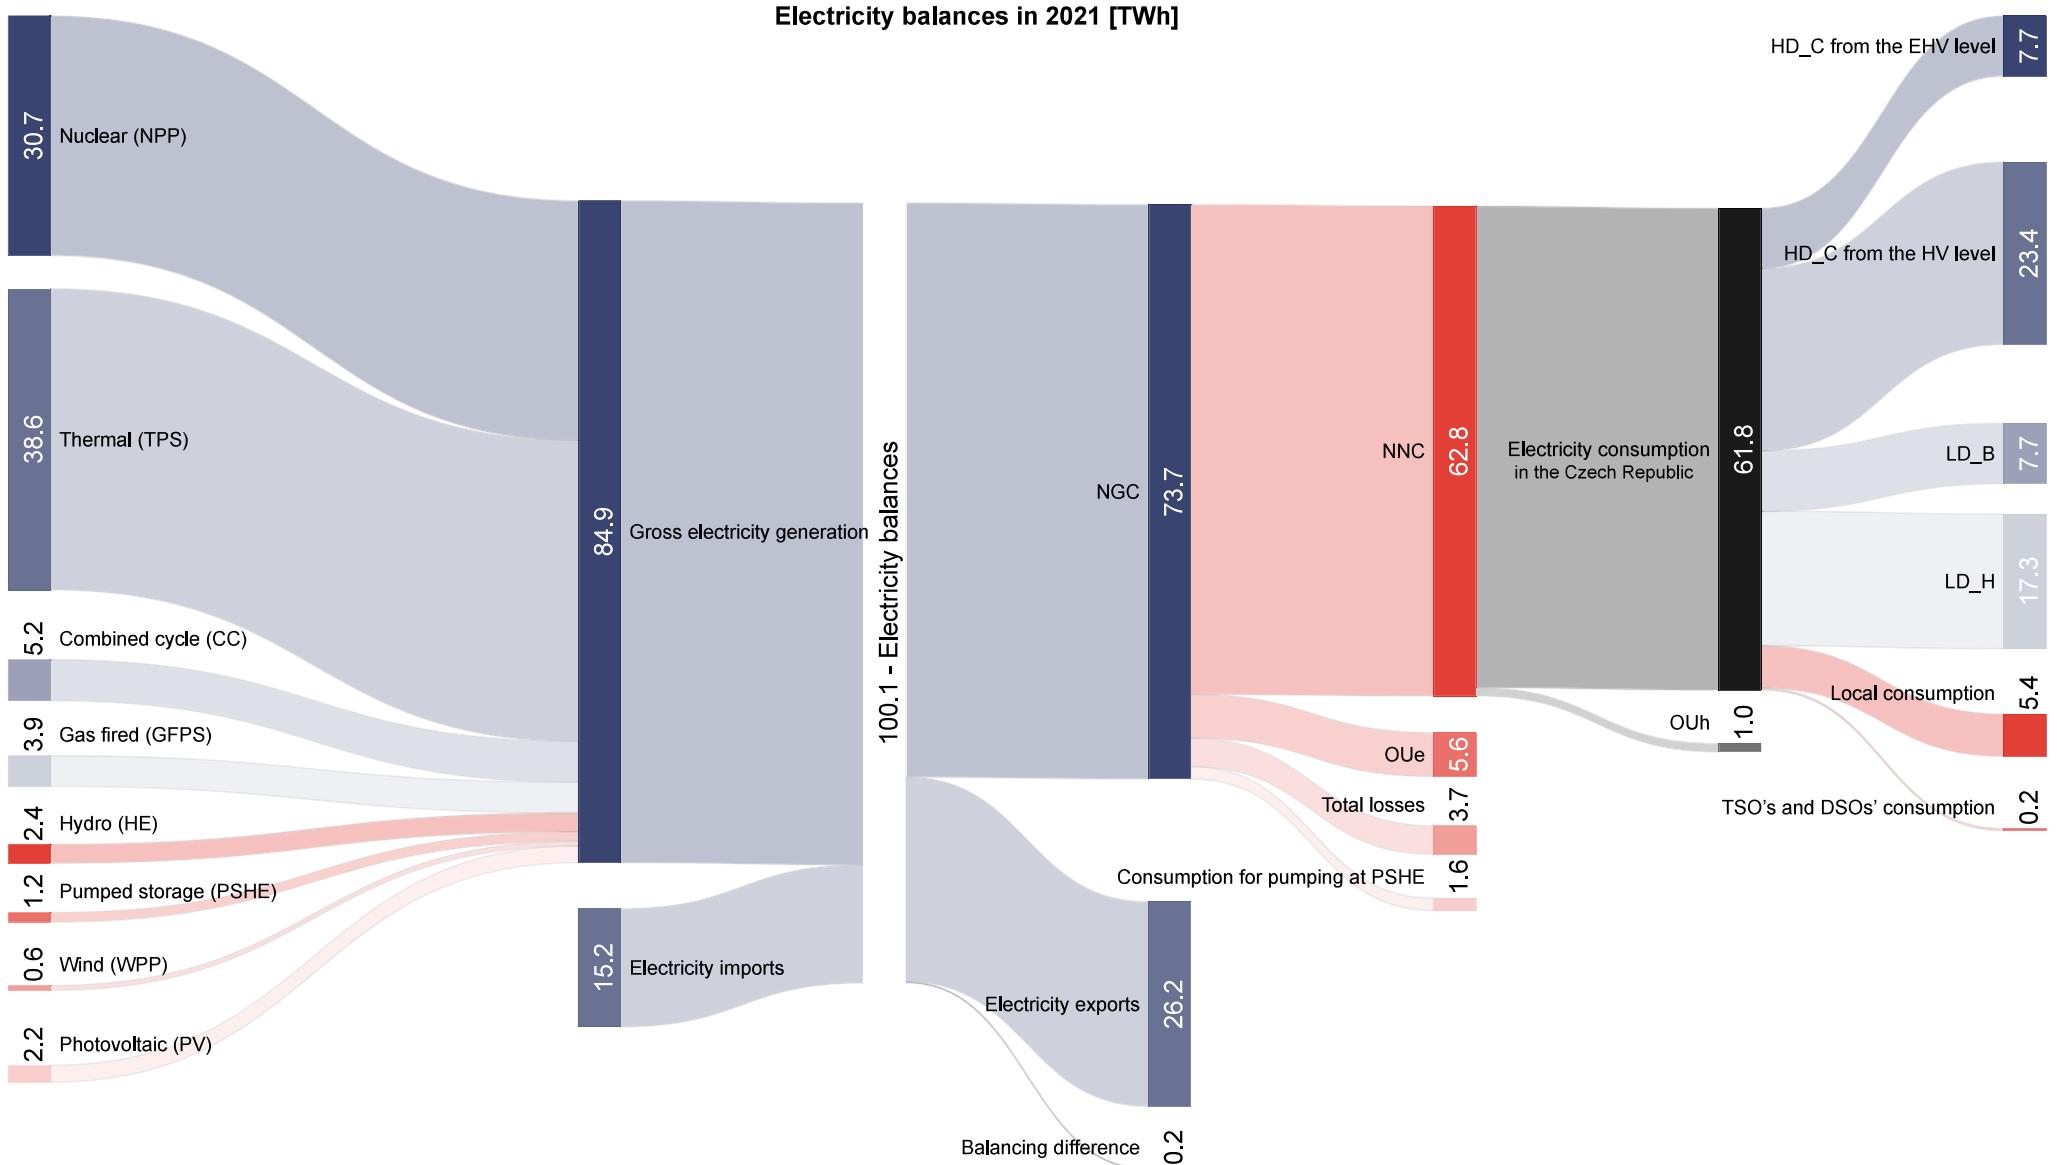

### Physical flows in the transmission system [TWh]

### Physical flows in the regional distribution systems [TWh]
