| 1 | ABBREVIATIONS, ACRONYMS AND EXPLANATIONS | 4 |
| 2 | COMMENTARY | 6 |
| 3 | ELECTRICAL ENERGY BALANCES, GENERATION AND CONSUMPTION | 7 |
| 3.1 | Electrical energy balances – generation | 7 |
| 3.2 | Electrical energy balances – consumption | 8 |
| 3.3 | Development of electrical energy balances and generation | 9 |
| 3.4 | Year-on-year change in electricity generation | 10 |
| 3.5 | Fuels and technologies used in gross electricity generation | 11 |
| 3.6 | Fuels and technologies used in gross electricity generation - history | 12 |
| 3.7 | Development of electricity generation and consumption | 13 |
| 3.8 | Year-on-year change in electricity consumption | 14 |
| 3.9 | Long-term development in electricity generation and consumption | 15 |
| 3.10 | Development of electricity consumption by demand category | 16 |
| 4 | ELECTRICITY GENERATION AND CONSUMPTION IN CZECH REGIONS AND REGIONAL DISTRIBUTION SYSTEMS | 17 |
| 4.1 | Gross electricity generation in Czech Regions by generating technology | 17 |
| 4.2 | Net electricity consumption in Czech Regions by demand category | 17 |
| 4.3 | Net electricity consumption in Czech Regions by national economy sector | 18 |
| 4.4 | Year-on-year change in net electricity consumption by national economy sector | 19 |
| 4.5 | Fuels and technologies in gross electricity generation in Czech Regions | 20 |
| 4.6 | Installed capacity and electricity generation and consumption in each of the Czech Regions | 21 |
| 4.7 | Net electricity consumption in each RDS | 35 |
| 4.8 | Year-on-year change in net electricity consumption in regional distribution systems | 36 |
| 5 | ELECTRICITY GENERATION BY TECHNOLOGY AND FUEL | 37 |
| 5.1 | Nuclear power plants and thermal power stations | 37 |
| 5.2 | Combined cycle plants | 38 |
| 5.3 | Gas fired power stations | 39 |
| 5.4 | Hydroelectric, including pumped storage, power stations | 40 |
| 5.5 | Wind power plants | 41 |
| 5.6 | Photovoltaic plants | 42 |
| 5.7 | Combined heat and power generation | 43 |
| 5.8 | Generation from biomass | 44 |
| 5.9 | Generation from biogas | 45 |
| 6 | INSTALLED CAPACITY IN THE CZECH ELECTRICITY GRID AND BREAKDOWN BY CZECH REGIONS | 46 |
| 7 | CROSS-BORDER FLOWS | 47 |
| 7.1 | Cross-border physical flows | 47 |
| 7.2 | Year-on-year change in cross-border physical flows | 48 |
| 7.3 | Development of cross-border physical flows | 48 |
| 8 | PEAK AND MINIMUM LOADS | 49 |
| 8.1 | Monthly peak and minimum gross loads in the Czech electricity grid | 49 |
| 8.2 | Structure of meeting the year's daily peak/minimum loads on the Czech grid in 2023 | 50 |
| 8.3 | Days of the peak and minimum loads on the Czech grid between 2014 and 2023 | 51 |
| 9 | BALANCES, TECHNICAL DETAILS AND SUPPLY QUALITY IN TS AND RDS AND TARIFF STATISTICS | 52 |
| 9.1 | Balances of physical flows in the TS and RDS | 52 |
| 9.2 | Lengths of routes and lines in the TS and RDS | 53 |
| 9.3 | Supply points and transformers in the TS and RDS | 54 |
| 9.4 | Key technical details on the TS and RDS | 55 |
| 9.5 | Development in the electricity supply quality | 56 |
| 9.6 | Tariff statistics | 57 |
| 9.7 | Development in the tariff statistics | 58 |
| 10 | ADDITIONAL GRAPHS AND ELECTRICAL ENERGY BALANCE DIAGRAM | 60 |

INTRODUCTION

The Energy Regulatory Office (ERO) publishes the Yearly Report on the Operation of the Czech Electricity Grid for 2023 under Section 17(7)(m) of Act No 458/2000 on Business and State Administration in Energy Industries and Amending Certain Laws (the Energy Act), as amended. The statistics contained herein are mainly intended for Czech governmental authorities and institutions and those of the European Union, and expert circles.

In this report, the ERO discloses all available operating and technical data representing physical flows of electricity. The ERO obtains data for the yearly report under Public Notice 404/2016 on the particulars and structure of the returns required for preparing reports on the operation of systems in energy industries, including the dates, scope and rules for preparing the returns (the Statistics Public Notice), as amended, which came into effect on 1 January 2017. Under its competences set out in Section 20a(4)(e) of the Energy Act, the market operator prepares its monthly and yearly statistics of the electricity and gas markets, which supplement the ERO's statistics with trading data.

All data for this report has been obtained from licensed entities: electricity generators, distribution system operators, the transmission system operator, and the market operator.

Based on the returns from distribution system operators, this report also newly contains data for 2022 and 2023 on unlicensed generating facilities that are connected to distributions systems. These facilities constitute certain installed capacity. Using the data on licenced facilities from the market operator, electricity generation by this capacity was derived therefrom. Supply to the grid was deducted from this generated electricity, which yielded consumption at points of generation that was added to the consumption of households and small business, and, if applicable also of the 'Others' item, on the basis of the distribution tariffs.

This Yearly Report on the Operation of the Czech Electricity Grid for 2023 follows up on the yearly reports released in preceding years and provides information about the electricity industry's key statistics for 2023, including their development over the past ten years. Its respective chapters contain statistics on electrical energy balances, generation and consumption by category, including generation from renewable energy sources (RES) and combined heat and power generation (CHP). The report also contains an overview of the installed capacities in the Czech electricity grid, cross-border electricity flows, some Region-specific evaluations, and tariff statistics. The yearly report for 2023 is based on the data in the report for 4Q 2023 and contains some data for 2021 and 2022 that is more accurate, largely in connection with an update of the data from OTE, a.s. and corrections of identified mistakes.

This yearly report does not contain the data on over 50 kW facilities generating electricity from renewable sources, which had not been provided to the market operator by the closing date of this report. On 31 December 2023, the installed capacity of these facilities totalled 155 MW (photovoltaic 139 MW, hydro 5 MW, and wind power 11 MW).

1 ABBREVIATIONS, ACRONYMS AND EXPLANATIONS

| | |
|-----------------------|---------------------------------------------------------------------------------------------|
| BDMW | biologically degradable municipal waste |
| CAIDI | Customer Average Interruption Duration Index in the period under review |
| CC | combined cycle plants |
| ČEPS | ČEPS, a.s. - the Transmission System Operator |
| ČEZ Distribuce | ČEZ Distribuce, a. s. - a Regional Distribution System Operator |
| DS | distribution system |
| DSO | distribution system operator |
| EG.D | EG.D, a.s. - a Regional Distribution System Operator |
| EHV | extra high voltage over 52 kV (under the ČSN 330010 standard) [\approx high voltage] |
| GFPS | gas fired power stations |
| HD_C | high demand customers |
| HE | hydroelectric power stations |
| HV | high voltage from 1 kV to 52 kV (under the ČSN 330010 standard) [\approx medium voltage] |
| CHP | combined heat and power generation |
| LD_B | low demand customers, businesses |
| LD_H | low demand customers, households |
| LDS | local distribution system |
| LV | low voltage up to 1 kV (under the ČSN 330010 standard) |
| NPP | nuclear power plants |
| PREDistribuce | PREDistribuce, a.s. - a Regional Distribution System Operator |
| PSHE | pumped storage hydroelectric power stations |
| PV | photovoltaic plants |
| RDS | regional distribution system |
| RES | renewable energy sources |
| SAIDI | System Average Interruption Duration Index in the period under review |
| SAIFI | System Average Interruption Frequency Index in the period under review |
| TPS | thermal power stations |
| TS | transmission system |
| TSO | transmission system operator |
| WPP | wind power plants |

Balancing difference =

Gross electricity generation + cross-border balance - national gross consumption (NGC).

Total losses =

Losses in distribution system operators' and the transmission system operator's networks.

Installed capacities =

Installed capacities reflect the capacities actually connected in the transmission system and the distribution systems, i.e. the figures do not reflect the sum of the capacities from licences awarded for the respective category of electricity generation.

Local consumption =

Consumption of producers and entities directly connected to the respective generating facility. The consumption of producers from unlicensed generating facilities is not included in this figure; it is part of the consumption of LD_H and LD_B.

Cross-border balance =

Net balance of cross-border exchanges of electrical energy in a given period. It is the difference between total electricity imports and total electricity exports in a given period. A positive value denotes electricity imports exceeding exports, and a negative value denotes electricity exports exceeding imports.

Electricity consumption in the CR =

NNC - OU_h.

Own use (process only) for electricity generation (OU_e) =

This expression denotes the consumption of electricity that is required for the electricity generating process. It covers all operations that are crucial for electricity generation, including losses in electricity generation. The definition is based on 'process own use' specified in Section 2(u) of Act No 165/2012 on supported energy sources and amending certain laws, as amended.

Own use (process only) for heat production (OU_h) =

Analogous to OU_e.

National gross consumption (NGC) =

NNC + consumption for pumping at PSHE + total losses + OU_e.

National net consumption (NNC) =

HD_C at the EHV level + HD_C at the HV level + LD_H + LD_B + consumption of the TSO and DSOs + local consumption + OU_h.

Gross electricity generation =

Total electricity available at generator terminals.

Net electricity generation =

Gross electricity generation minus OU_e.

Gross load =

The hourly value of electrical power supplied to the Czech electricity grid by connected electricity producers +/- net balance - pumping at PSHE.

Load (without OU_e) =

Gross load - OU_e.

2 COMMENTARY

In 2023, gross electricity generation totalled 76.9 TWh, down by 7.8 TWh (-9.2%) on 2022. The largest year-on-year change in gross electricity generation was registered in thermal power stations, which produced 7.3 TWh less (-17.8%) year-on-year while their installed capacity remained almost unchanged (+0.6%). Combined cycle units produced 0.4 TWh less (-17.6%), gas-fired power stations produced 0.2 TWh less (-5.1%) and nuclear power plants produced 0.6 TWh less (-2%). On the other hand, gross electricity generation rose the most in photovoltaic plants, by 0.4 TWh (+16.2%). More electricity was also generated in hydroelectric power stations, by 0.3 TWh (+12.5%), wind power plants (+9.4%) and pumped-storage hydroelectric power stations (+7.6%). Gross electricity generation from brown coal dropped by 6.5 TWh (-19%) and from hard coal by 0.5 TWh (-20.9%) year-on-year. Electricity production from natural gas dropped by 0.6 TWh (-16%) compared with 2022.

Gross electricity generation from renewable energy sources increased by 511 GWh (+4.8%) year-on-year. Electricity from biomass declined by 221 GWh (-8.3%) and from biogas and landfill gas by (-0.5%). On the other hand, as regards the other renewable energy sources, electricity generation increased year-on-year, the most in photovoltaic plants, by 403 GWh (+16.2%). Electricity generation in large hydroelectric power stations (with an installed capacity of 10 MW or more) rose by 164 GWh (+16%) and in small hydroelectric power stations by 98 GWh (+9.1%). Electricity generation also increased from biologically degradable municipal waste (+15.8%) and from wind power plants (+9.4%).

Gross electricity consumption declined to 67.9 TWh (-4.3%) in 2023. Most of the decrease took place at high-demand customers taking power from HV networks, by 0.9 TWh (-4.1%), households, by 0.3 TWh (-2.1%), low-demand business customers, by 0.2 TWh (-2.9%) and high-demand customers taking power from EHV networks, by 0.1 TWh (-1.4%).

As in preceding years, 2023 also saw a negative net balance of electricity imports and exports, amounting to 9.2 TWh. This implies a year-on-year decrease of 4.3 TWh (-32.1%). Exports and imports dropped by 7.6 TWh (-25.1%) and 3.3 TWh (-19.5%) respectively year-on-year.

The annual peak load in the grid was registered on 7 February 2023 at 8:45 hrs (11,278 MW). The annual minimum load was registered on 7 May 2023 at 5:45 hrs (4,522 MW). The report also evaluates 15-minute load and consumption variations, including the structure of the generating capacities covering the peak load and the minimum load. Consumption on the peak and minimum load days in preceding years is also shown.

The report also shows the key technical data on the transmission system and regional distribution systems, including the supply quality ratios. The report contains tariff statistics, including their development over the last ten years. The statistics provide an overview of the number of supply points and electricity consumption by distribution tariff; they are based on billing data. The Sankey diagram, depicting the electrical energy balance for 2023, is attached at the end of the report.

3 ELECTRICAL ENERGY BALANCES, GENERATION AND CONSUMPTION

3.1 Electrical energy balances – generation [GWh]

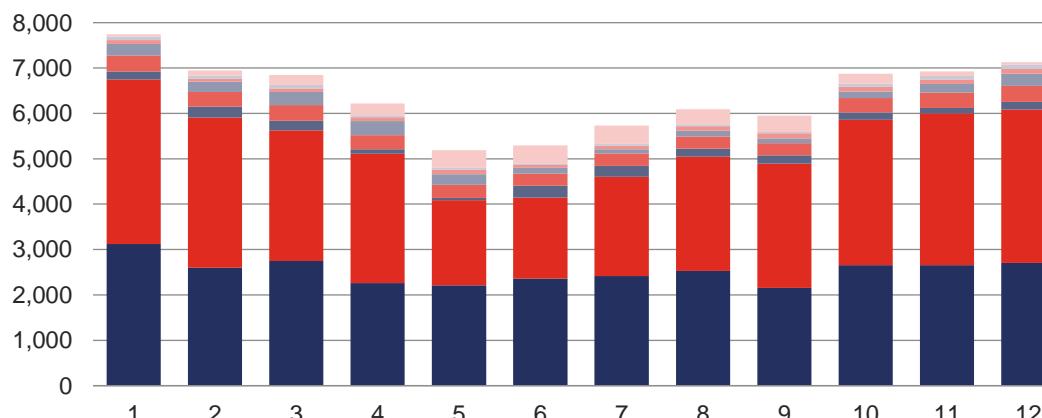

| | January | February | March | April | May | June | July | August | September | October | November | December | Total |
|---------------------------------------------------------------------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|-----------------|
| Gross electricity generation | 7,746.0 | 6,946.5 | 6,850.2 | 6,218.1 | 5,187.1 | 5,291.3 | 5,729.1 | 6,091.3 | 5,952.1 | 6,872.4 | 6,925.5 | 7,128.9 | 76,938.5 |
| Nuclear (NPP) | 3,119.8 | 2,602.5 | 2,746.2 | 2,263.9 | 2,213.7 | 2,357.4 | 2,413.6 | 2,526.8 | 2,152.1 | 2,652.5 | 2,654.0 | 2,707.9 | 30,410.5 |
| Thermal (TPS) | 3,625.0 | 3,309.0 | 2,881.3 | 2,847.9 | 1,872.2 | 1,789.5 | 2,193.0 | 2,521.7 | 2,741.0 | 3,204.2 | 3,346.1 | 3,380.2 | 33,711.1 |
| Combined cycle (CC) | 182.9 | 237.8 | 212.1 | 101.6 | 49.1 | 256.2 | 237.2 | 173.1 | 185.5 | 167.6 | 117.6 | 168.2 | 2,088.9 |
| Gas fired (GFPS) | 350.8 | 324.0 | 343.5 | 307.0 | 293.8 | 271.3 | 273.3 | 271.7 | 267.3 | 311.4 | 341.6 | 351.1 | 3,706.9 |
| Hydro (HE) | 249.6 | 222.9 | 288.7 | 312.7 | 234.3 | 129.5 | 90.3 | 124.2 | 105.1 | 147.6 | 189.2 | 268.9 | 2,363.0 |
| Pumped storage (PSHE) | 89.2 | 65.6 | 80.2 | 81.8 | 92.8 | 59.4 | 81.6 | 98.3 | 109.6 | 102.3 | 100.3 | 103.5 | 1,064.4 |
| Wind (WPP) | 74.7 | 68.0 | 77.2 | 45.3 | 46.0 | 33.5 | 40.7 | 41.2 | 33.8 | 67.9 | 79.9 | 93.2 | 701.6 |
| Photovoltaic (PV) | 54.0 | 116.7 | 220.9 | 258.0 | 385.1 | 394.4 | 399.3 | 334.3 | 357.7 | 218.8 | 96.8 | 56.0 | 2,892.1 |
| Own use (process only) for electricity generation (OU_e) | 508.4 | 450.1 | 435.7 | 410.8 | 348.9 | 344.2 | 377.9 | 420.8 | 420.4 | 478.1 | 474.2 | 482.9 | 5,152.3 |
| Nuclear (NPP) | 167.9 | 139.1 | 145.1 | 125.7 | 126.5 | 134.8 | 132.8 | 147.5 | 126.6 | 148.9 | 140.3 | 146.1 | 1,681.3 |
| Thermal (TPS) | 314.8 | 286.5 | 263.4 | 260.7 | 197.1 | 182.8 | 217.7 | 246.6 | 267.6 | 303.1 | 309.2 | 310.7 | 3,160.1 |
| Combined cycle (CC) | 2.3 | 2.9 | 2.8 | 1.4 | 1.1 | 4.1 | 3.7 | 2.9 | 3.3 | 2.6 | 1.7 | 2.1 | 30.8 |
| Gas fired (GFPS) | 18.8 | 17.3 | 18.9 | 17.8 | 18.5 | 18.1 | 18.8 | 18.8 | 17.9 | 18.4 | 17.9 | 18.4 | 219.4 |

Gross electricity generation [GWh]

- Nuclear (NPP)
- Gas fired (GFPS)
- Wind (WPP)

- Thermal (TPS)
- Hydro (HE)
- Photovoltaic (PV)

- Combined cycle (CC)
- Pumped storage (PSHE)

Net electricity consumption [GWh]

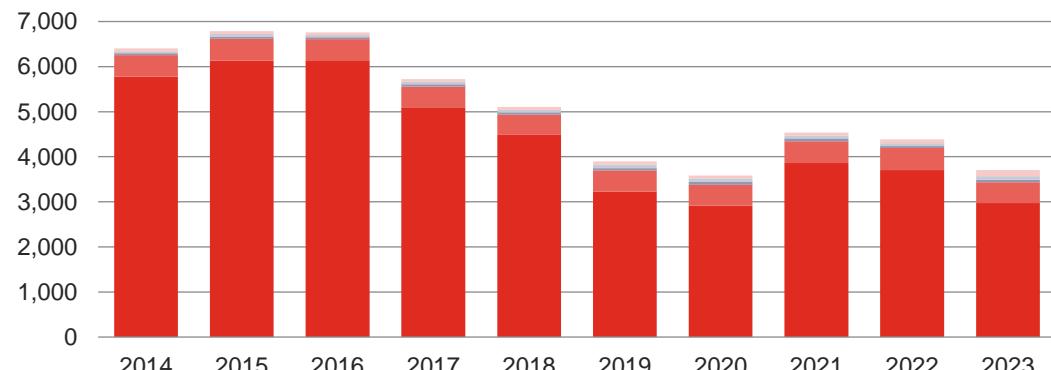

- High demand from EHV (HD_EHV)
- Low demand businesses (LD_B)
- High demand from HV (HD_HV)
- Low demand households (LD_H)

Monthly peak and minimum loads [MW]

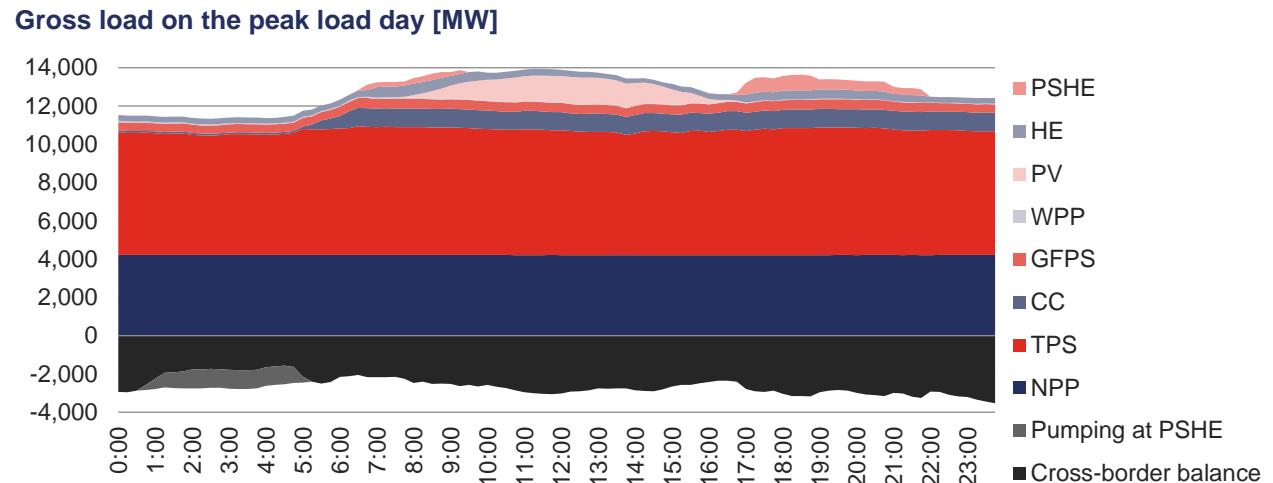

Peak load time and minimum load time

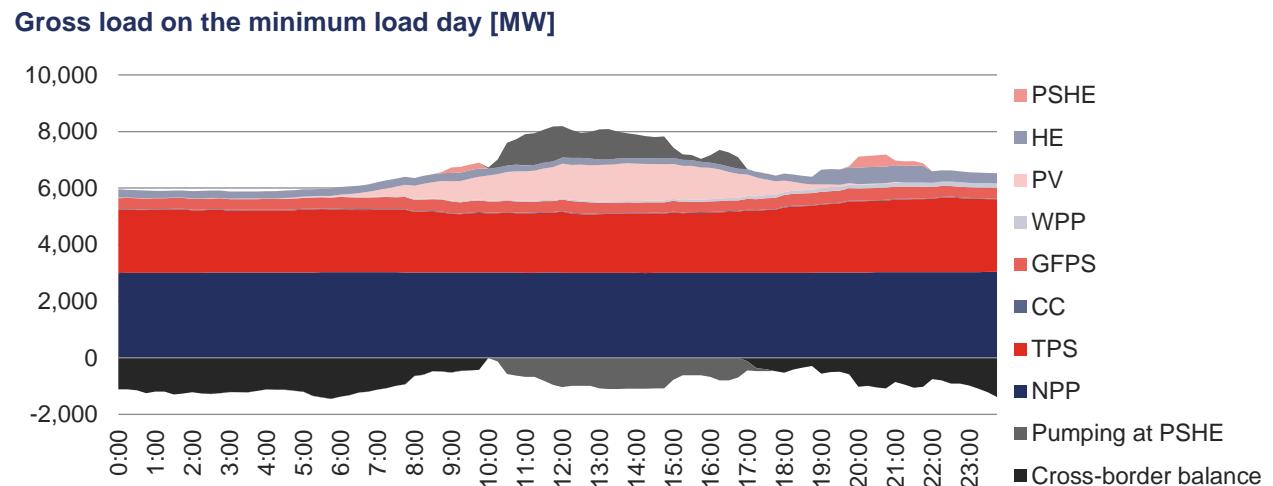

8.2 Structure of meeting the year's daily peak/minimum loads on the Czech grid in 2023

| Structure of meeting the daily peak load | | |
|------------------------------------------|-----------------|-------------|
| (7. 2. 2023 08:45) | [MW] | |
| Gross load | 11,277.8 | 100% |
| Nuclear power plants (NPP) | 4,214.7 | 37% |
| Thermal power stations (TPS) | 6,656.3 | 59% |
| Combined cycle plants (CC) | 973.7 | 9% |
| Gas fired power stations (GFPS) | 498.0 | 4% |
| Hydroelectric power stations (HE) | 562.3 | 5% |
| Pumped storage power stations (PSHE) | 301.4 | 3% |
| Photovoltaic plants (PV) | 517.2 | 5% |
| Wind power plants (WPP) | 49.7 | 0% |
| Cross-border balance | -2,495.5 | -22% |
| Pumping at PSHE | 0.0 | 0% |

| Structure of meeting the daily minimum load | | |
|---------------------------------------------|----------------|-------------|
| (7. 5. 2023 05:45) | [MW] | |
| Gross load | 4,521.6 | 100% |
| Nuclear power plants (NPP) | 3,021.8 | 67% |
| Thermal power stations (TPS) | 2,227.0 | 49% |
| Combined cycle plants (CC) | 24.2 | 1% |
| Gas fired power stations (GFPS) | 389.8 | 9% |
| Hydroelectric power stations (HE) | 254.6 | 6% |
| Pumped storage power stations (PSHE) | 0.0 | 0% |
| Photovoltaic plants (PV) | 38.8 | 1% |
| Wind power plants (WPP) | 21.1 | 0% |
| Cross-border balance | -1,450.4 | -32% |
| Pumping at PSHE | -5.4 | 0% |

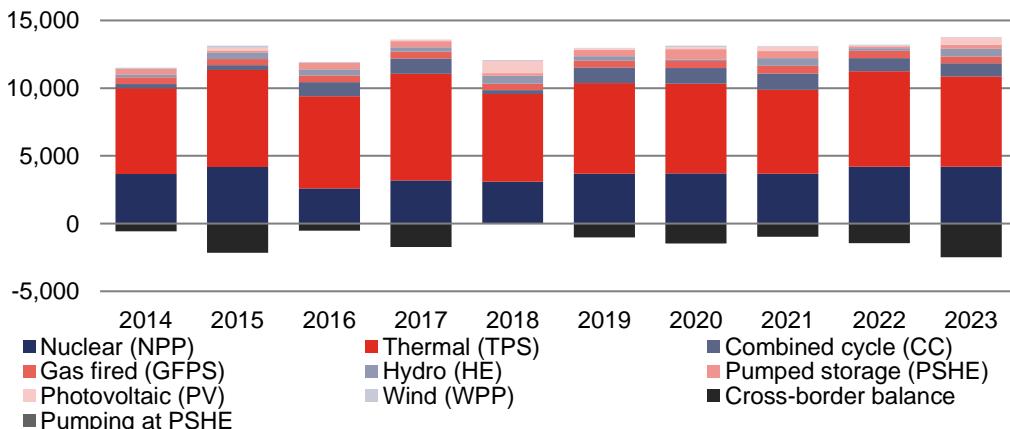

8.3 Days of the peak and minimum loads on the Czech grid between 2014 and 2023

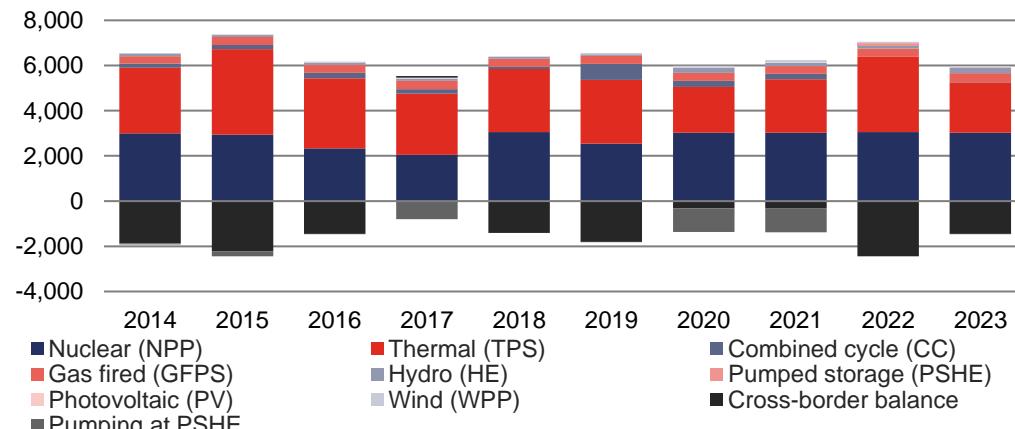

| Peak load days | NPP | TPS | CC | GFPS | HE | PSHE | PV | WPP | Cross-border balance | | PSHE | OU _e | Gross load | Load (w/o OU _e) | Gross consumption |
|------------------|-------|-------|-------|------|-----|------|-----|-----|----------------------|------|------|-----------------|------------|-----------------------------|-------------------|

Low demand customers, businesses (LD_B)

Low demand customers, households (LD_H)

Note: The tariff statistics in chapters 9.6 and 9.7 have been compiled from regulatory reports under Section 20 of Act No 458/2000, the Energy Act, as amended, and include only the three largest regional distribution systems. The numbers of supply points relate to 31 December of the respective year and include electricity producers' delivery points that do not have to be supply points. The consumption data shows the billed electricity quantities accepted from the documents issued in the respective year and therefore does not match the consumption data in the other chapters of the Report.

Note: The tariff statistics in chapters 9.6 and 9.7 have been compiled from regulatory reports under Section 20 of Act No 458/2000, the Energy Act, as amended, and include only the three largest regional distribution systems. The numbers of supply points relate to 31 December of the respective year and include electricity producers' delivery points that do not have to be supply points. The consumption data shows the billed electricity quantities accepted from the documents issued in the respective year and therefore does not match the consumption data in the other chapters of the Report.

Note: The tariff statistics in chapters 9.6 and 9.7 have been compiled from regulatory reports under Section 20 of Act No 458/2000, the Energy Act, as amended, and include only the three largest regional distribution systems. The numbers of supply points relate to 31 December of the respective year and include electricity producers' delivery points that do not have to be supply points. The consumption data shows the billed electricity quantities accepted from the documents issued in the respective year and therefore does not match the consumption data in the other chapters of the Report.
